

To learn more
about joining the
ROADMAPS study:

Research on Advanced Diagnostics and Management of All Pregnancies to Prevent Stillbirth

We aim to better
understand which
pregnancies may need
extra care or support.

Our goal is to help
ensure the best possible
outcomes for both
mothers and babies.

ROADMAPS
Study

Improving pregnancy outcomes through collaborative research

What We Want to Learn

The **ROADMAPS Study** is a groundbreaking study that will follow pregnant people from different U.S. sites over time. The purpose is to identify pregnancies that may be at higher risk for problems.

This study will focus on various tests and procedures that are commonly performed during pregnancy. By better understanding how these data are related to outcomes, we hope to provide important information to pregnant people and health care providers.

What Participants Can Expect During the Study

If you agree to participate in this study, you will receive standard clinical care. The research team will work with you throughout your pregnancy until 6 weeks after delivery to:

Complete Study Questionnaires

Answer online questions, a few times, about your health, pregnancy, nutrition, and daily life

Participate in Additional Ultrasounds

Schedule and complete up to two extra ultrasounds (around 12 weeks and 28-32 weeks).

Provide Research Samples

Give samples, including blood (up to three times), urine (once), and leftover samples after delivery (cord blood and placenta)

Record Health Measurements

Have your height, weight, and blood pressure measurements taken

Share Pregnancy Medical Records

Allow researchers to look at your medical records related to pregnancy
